Allowable Subject Matter

Claims 24-37 (now renumbered 1-14) are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record neither shows nor suggests the projector apparatus comprising all of the elements of claim 24 and particularly: “wherein a thickness of said substrate of said optical element arranged on exit surface side of said first image forming panel is larger than those of said substrates of said optical elements arranged on exit surface sides of said second and third image forming panels in said optical elements each arranged on exit surface side of said first image forming panel, said second image forming panel and said third image forming panel”.

The prior art of record neither shows nor suggests the projector apparatus comprising all of the elements of claim 26 and particularly: “wherein an area of said substrate of said optical element arranged on exit surface side of said first image forming panel is larger than those of said substrates of said optical elements arranged on exit surface sides of said second and third image forming panels in said optical elements each arranged on exit surface side of said first image forming panel, said second image forming panel and said third image forming panel”.

The prior art of record neither shows nor suggests the projector apparatus comprising all of the elements of claim 28 and particularly: “wherein a surface area of said substrate of said optical element arranged on exit surface side of said first image forming panel is larger than those of said substrates of said optical elements arranged

on exit surface sides of said second and third image forming panels in said optical elements each arranged on exit surface side of said first image forming panel, said second image forming panel and said third image forming panel”.

The prior art of record neither shows nor suggests the projector apparatus comprising all of the elements of claim 30 and particularly: “wherein a thickness of said first polarizing plate is greater than a thickness of said second polarizing plate and a thickness of said third polarizing plate”. Claim 34 is allowed for the same reasons.

The prior art of record neither shows nor suggests the projector apparatus comprising all of the elements of claim 32 and particularly: “wherein a thermal conductivity of a material of said first polarizing plate is greater than a thermal conductivity of a material of said second polarizing plate and a thermal conductivity of a material of said third polarizing plate”. Claim 36 is allowed for the same reasons.

As a result, image quality suffers less degradation due to heat load on the components than in the prior art.
